

## A Global Platform For Decentralised Organisations

EtherInc is a blockchain project to create and run decentralised digital organisations based on cryptographic proof instead of trust or intermediaries

### WHAT PROBLEM DOES ETHERINC SOLVES ?

The growth of internet has enabled people to work remotely, but little has been done to fix how organisations work. Starting an organisations is still needlessly complicated with lengthy paperwork, legal complexities, numerous fees and unnecessary intermediaries and third parties imposing artificial restrictions. Even today, entrepreneurs face lots of friction trying to build global organisations. EtherInc (also referred to as elnc in short) is making DAOs a reality. elnc organisations are borderless and decentralised, just like Bitcoin, that are not limited by demographics, intermediaries and artificial restrictions.

### WHAT MAKES ETHERINC UNIQUE FROM OTHERS?

EtherInc is the first LIVE blockchain for decentralised organisations. We already developed elnc protocol for running decentralised organisations. Our goal is to replace traditional company with elnc organisations.

### WHAT IS ETI COIN ?

ETI coins are the fuel of EtherInc blockchain, just like Ethereum has ETH coins as a fuel in Ethereum blockchain
